

UNIA **AUTOMATION**

IMPROVE YOUR HOME EXPERIENCE

BUSY LIFESTYLE?

Whether you're heading out or getting back, manage your entire home with just one touch.

UNA Automation is the intelligent home and building management system designed and created by Master.

With thousands of systems installed over the last 15 years on four continents, the *UNA Automation* system assures **safety and reliability** – even in countries with different standards, needs and customs.

The constant addition of devices and functions allows a building managed using *UNA Automation* to be 'future-proofed', keeping it continuously updated and in step with the times: it continues to grow and improve your living experience.

The 7" **Mimi** and 10" **Tosca** control devices add flexibility and control capabilities to the advanced system.

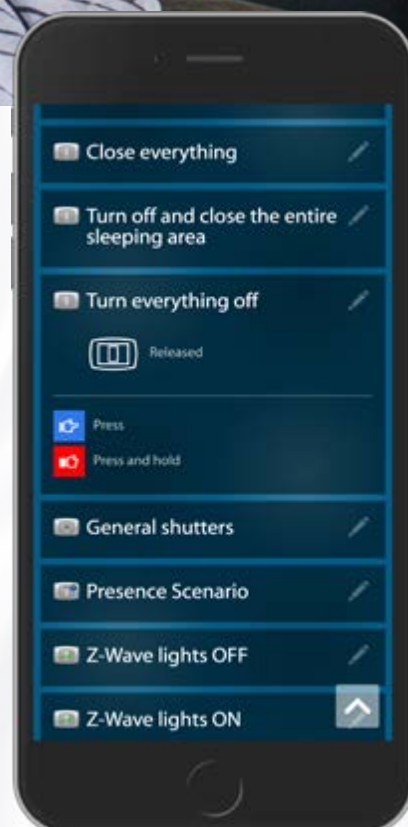

Whether it's a small apartment, an entire building or a hotel lobby, the management panel allows you to switch devices on and off, and carry out complex operations with just one touch, as well as providing a complete overview through interactive graphics.

WANT TO WAKE UP LIKE THIS?

With the wake setting, your whole house will wish you a good morning: raise shutters, heat rooms... whatever you want.

With just a **click**, a **touch** or preset **to the time you choose**: your home wakes up just the way you want it.

Lights, shutters, appliances, air conditioning, energy management: all devices connected to the *UNA Automation* system can be managed using traditional home controls or the app and web services, but in particular by means of fully synchronized activation and deactivation of preset 'scenes'.

A scene doesn't just mean "Turn everything on" or "Turn everything off". With *UNA Automation* you can program your outside lights to **come on at sunset**, every day of the year, without needing to reprogram them; or set your garden irrigation system to **come on only when it's really necessary**; your energy manager tracks your energy usage, seamlessly **balancing your domestic energy** supply between the grid and your photovoltaic system.

Scenes simplify your daily life.

FORGOTTEN TO CLOSE YOUR AWNINGS?

No problem!
By using your smartphone
or via the internet
you can do it anywhere.

The **UNA Mobile** app is available for iOS and Android. Together with the *SideraHome* local service and the *SideraWeb* web service provides you with seamless control of the *UNA Automation* system — wherever you are and through any connected device.

All services are free and allow you to control your system locally using the *Vesta* control unit if it's connected to your home WiFi, or from a mobile device connected to the internet.

WHAT IF A COURIER ARRIVES?

Simply open your gate
without interrupting
what you're doing.

The **UNA Voice add-in** service allows you to use voice commands through *Amazon Alexa™* Echo and *Google Home™* devices.

Once activated, you can use voice assistants to effortlessly interact with the *UNA Automation* system, unlocking infinite control possibilities whether you're at home or away.

Alexa, turn on *Everything off*

Ok.

Alexa, what's the temperature in the living room?

The *Thermostat* temperature is 22 degrees.

Google Assistant

EMPTY ROOMS WASTING ENERGY?

You can monitor the energy consumption of each room directly from reception and deactivate services and utilities when guests have vacated rooms.

Specific devices such as **access management, keycard readers, sensors, numeric keypads** and dedicated **functionality software** makes the *UNA Automation* system the ideal solution also for the hospitality industry, providing effortless management from the smallest apartment to the largest hotel.

UNA Automation includes devices and components designed to carry out myriad tasks, which are centralized and controlled through an RS-485 BUS, but with the option of integrating Z-Wave+ wireless elements.

Download our dedicated brochure:

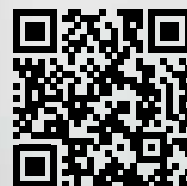

All the ease of management offered by the *UNA Automation* system applied to accommodation facilities, enabling remote control and management of **small B&Bs**, right through to optimizing energy consumption in **large hotels**, giving you full flexibility to select what to heat, cool, and light and so reduce energy wastage.
